Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: .after fixation the larval mouth has flattened considerably, and presents the very peculiar appearance represented in fig. 26, which should be compared with the section through the same region in a free-swimming larva (fig. 24). The central part, which stains but slightly, no longer shows any cell-outlines, but is traversed by a fine network of threads, and contains a few extremely minute cells, whose nuclei stain intensely, and which may very possibly be phagocytes; while at each side of the groove there lies a deeply-stained mass, containing a few large but inconspicuous nuclei and an enormous number of small deeply-stained nuclei, which apparently belong to cells similar to, but perhaps usually larger than, the phagocytes (?) in the centre. Similar cells have already attacked the ciliated bands in fig. 20. Some hours later a transverse section through the larval mouth presents the appearance shown in fig. 27. The fine network has disappeared, while the large nuclei have spread towards the centre; the whole mass stains deeply, but no true epithelium appears to be formed. In both this and the previous stage the striated border seen in fig. 24 is still represented by a hyaline region. Besides these details we notice in fig. 27 that two lateral folds are growing across the larval mouth to meet one another in the middle line: they meet and fuse first at the posterior end of the groove, but, their fusion extending rapidly forwards, we find, less than twelve hours after...
